Standard "A. W." Diamond

$\frac{1}{8}$ " to 1" inclusive

FEATURES

The design of the STANDARD "A.W." Diamond Pattern Floor Plate was scientifically developed to produce the most efficient anti-slip surface with proper consideration given to the effect of attrition in use.

The raised, oval, bevelled edge of the distinctive pattern provides traction around its entire circumference, and affords a firm foothold.

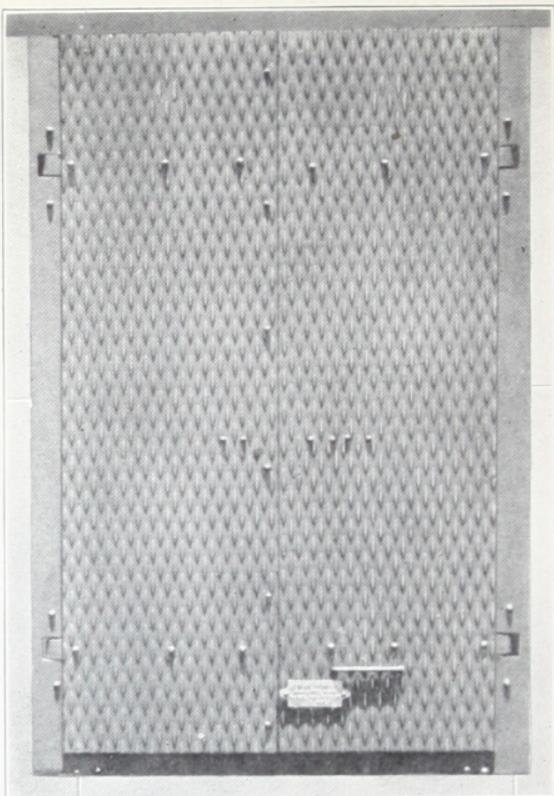

The open design of the patterned area prevents water, dirt, or refuse from permanently lodging on the plate, which is self-draining.

The uniformity of the pattern admits properly matching and presents a neat and attractive appearance, pleasing to the eye and harmonious in effect with any architectural design.

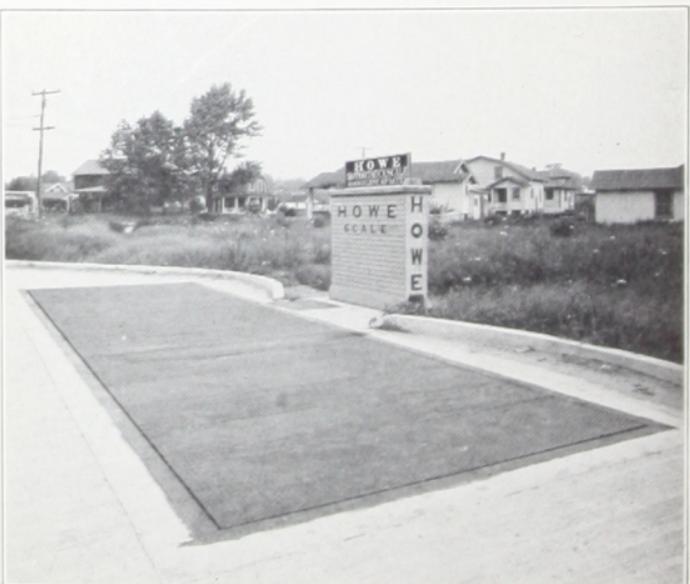

USES

"A.W." FLOOR PLATES are used in all step, flooring, platform, runway, trench-cover, and modern engineering and construction work generally.

*Samples and all engineering information
sent on request.*

“A. W.” Diamondette Pattern

No. 16 to 12 Gauge

“A.W.” DIAMONDETTE Pattern Floor Plates offer a lighter section with a proportionate saving in weight, embodying the same scientific features of the “A.W.” STANDARD Pattern, but providing a greater area of patterned surface, and affording greater strength than a plain section of corresponding gauge or thickness.

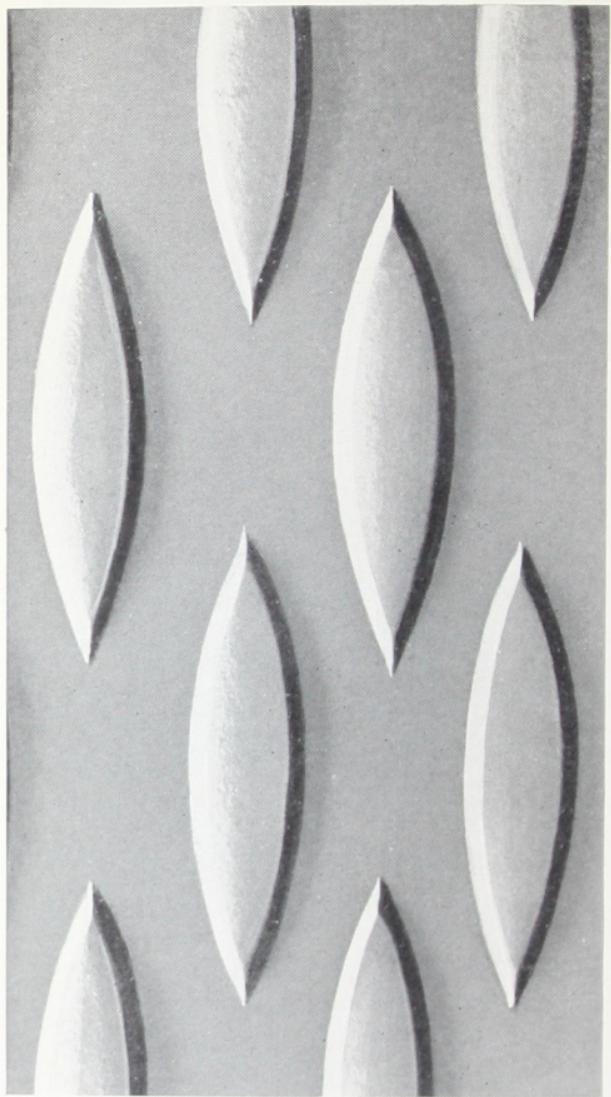

For automobile running boards, step-plates, floor boards, locomotive step-plates, vestibule platforms, aisleways, cover plates, and all places requiring a raised anti-slip surface without the necessity of providing carrying capacity in the plate itself, the “A.W.” DIAMONDETTE Floor Plates are decidedly advantageous.

*Samples and all Engineering
Information on Request*

“A. W.” Traffic Treads

STANDARD “A.W.” Floor Plates when used for vehicular runways on wooden bridge floors, platform scales, etc., are designated as “A.W.” TRAFFIC TREADS. Detailed folder furnished on request.

LENGTH AS ROLLED

WIDTH AS ROLLED

STANDARD "A.W." DIAMOND

(Full Size)

$\frac{1}{8}$ " to 1" inclusive

Length of diamond will run parallel to length as rolled. In specifying directions in which diamonds are desired to run, please note limits of width as rolled, shown on page 13.

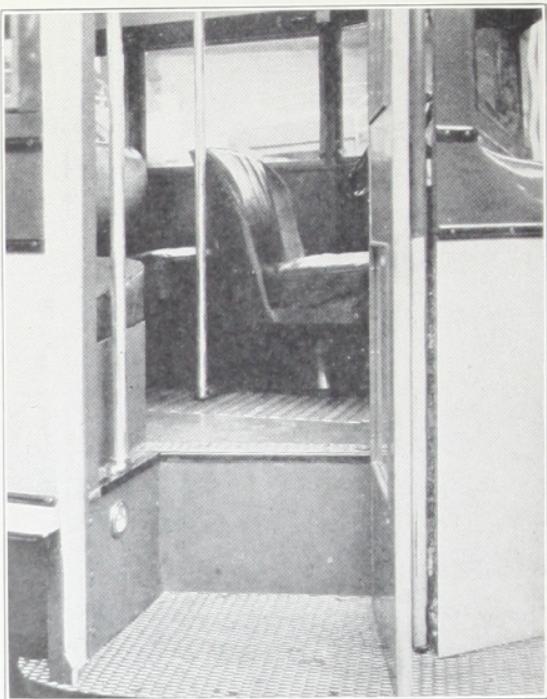

“A.W.” DIAMONDETTE

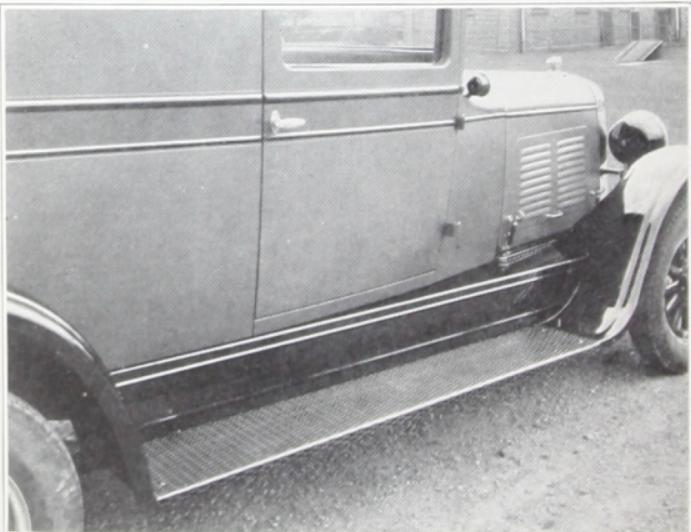

(Full Size)

No. 16 to 12 Gauge

Length of diamond will run parallel to length as rolled. In specifying directions in which diamonds are desired to run, please note limits of width as rolled, shown on page 13.

Shearing

Regular Mill Shearing. "A.W." Rolled Steel Floor Plates are furnished subject to the usual variations in rolling and shearing incident to regular mill practice, variation being over the sizes specified. The amount of variation depends upon thickness, width and length.

When so specified on order, the variation in shearing may be kept under rather than over.

Extra for Special Shearing. Shearing variations may be minimized by "Special Shearing" (sometimes called "Re-squaring") at 10 cents per 100 pounds extra.

"Special Sheared" Floor Plates are furnished in normal sizes with a total variation of $\frac{1}{4}$ ", which may be over or under, as preferred, or from $\frac{1}{8}$ " over to $\frac{1}{8}$ " under, making total of $\frac{1}{4}$ ". These variations are based on normal dimensions and may be exceeded depending on width, length and thickness.

Fabrication

All types of Special Forming, Bending, Punching, Countersinking, In-cutting, Circular Cutting, etc., quoted on application, accompanied by blue-print and details.

On request we will gladly furnish a graphic chart showing deflections and safe loads of our "A.W." Diamond Pattern Floor Plates
